**DETAILED ACTION**

***Specification***

1. The disclosure is objected to because of the following informalities: Foreign priority claim and PCT filings should have been inserted into the specification.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 9 and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrases "preferably" and "for example" render the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

***Claim Rejections - 35 USC § 101***

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 35 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. "A survey report " is printed matter.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rees (WO 02/14906 A1). Rees discloses substantially the same invention as claimed.

Although Rees discloses the use of the refracted wave component of the EM wave and the use of the seismic response, the reference does not teach the use of the refracted component of the seismic response. It is well known in the seismic art that parameters of subterranean formation have been derived from phase or amplitude seismic data in response to detected seismic wave refractions and /or reflections. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Rees by employing amplitude information from the two refracted components (i.e., those of EM wave and seismic responses) in order to produce the report (e.g., measurements, mapping, etc.) on the presence and nature of the subterranean strata (see: from p.5 line 18 to p.6 line 2; p.6 lines 27-28). See also "Written Opinion of International Search Authority" dated 9/16/05.

7. Claims 1-4, 13-16, 18-34 are allowed.

8. Claims 7-8, 10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
